

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)
Department of Computer Science and Engineering
ASSESSMENT TOOL 2– Seminar / Poster Presentation (Emerging LLMs & Industry Applications)

Course Code:	CSA65	Course Title:	Generative AI and Large Scale Models
CO Assessed:	CO5- BL-5 – Articulation	Assessment:	Assessment Tool 2- Seminar / Poster Presentation (Emerging LLMs & Industry Applications)
Weightage:	10% of CIA	Total Marks:	1 * 100= 100
CO5 Statement:	<i>Poster Presentation</i>		
Student Name:	Joanathan Packia Singh	Reg. No.:	192472229
Section / Batch:	SLOT A	Date:	26/08/2026

Instructions to Students

- Poster Presentation – Instructions

1. Poster Format

- Poster Size: A1 or A2
- Orientation: Portrait
- Poster should be clear, attractive, and visually engaging.
- Use a large, readable title and appropriate font sizes.
- Use diagrams, flowcharts, images, graphs, and icons instead of lengthy text.

2. Poster Content

- Each poster should contain the following sections:
- Title of the Topic
- Participant Name(s) & Department
- Introduction / Background
- Problem Statement
- Overview of the LLM Technology
- Architecture / Workflow / Working Principle
- Industry Applications
- Real-World Use Case
- Advantages
- Challenges / Limitations
- Future Scope

- Conclusion
- References
- Duration 30 mins

Code of Conduct

I Joanathan Packia Singh(192472229) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: Joanathan

TOPIC: LLMs in Legal Technology: Contract Analysis and Legal Research

RUBRICS FOR CALCULATION

Criteria	Wt.	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Currency of Content	30%	Demonstrates current, accurate knowledge of emerging trends/models	Mostly accurate and current content	Some outdated or inaccurate content	Largely inaccurate or outdated content
Industry Relevance	25%	Clearly connects trends to relevant engineering industry use-cases	Reasonable industry connections made	Weak industry connections	No industry relevance shown
Research Quality	20%	Well-researched with credible, recent sources	Adequately researched	Limited or dated sources used	Unresearched content
Visual & Delivery Impact	15%	Visually strong poster/slides; confident delivery	Clear poster/slides; decent delivery	Basic visuals; weak delivery	Poor visuals and delivery
Citations & Takeaways	10%	Proper citations and clear takeaways for the audience	Mostly cited; clear takeaways	Minimal citation; unclear takeaways	No citations; no clear message

Marks Evaluation:

Question No.	Currency of Content (30%)	Industry Relevance (25%)	Research Quality (20%)	Visual & Delivery Impact (15%)	Citations & Takeaways (10%)	Total Marks (100)
Q1						
Overall Total (100)						

LLMs in LEGAL TECHNOLOGY

CONTRACT ANALYSIS & LEGAL RESEARCH

Jonathan Packia Singh

Reg. No.: 192472229

Slot: A

Date: 26 Aug 2026

OVERVIEW OF THE LLM TECHNOLOGY

- Transformer-based models (GPT-4, Claude, Llama) pretrained on massive text corpora
- Adapted to law via Retrieval-Augmented Generation (RAG) or domain fine-tuning
- RAG grounds answers in real case law & clause libraries — reduces hallucination
- Fine-tuned models specialise in clause extraction, classification & redlining

ARCHITECTURE / WORKFLOW

A lawyer reviews every AI-generated output before it is used or filed.

INTRODUCTION / BACKGROUND

- Legal work is document- and language-heavy — a natural fit for LLMs
- LLM copilots moved from chat assistants into core legal workflows (2024–2026)
- Firms & in-house teams now use AI daily for contract review and case research

PROBLEM STATEMENT

- Manual contract review can take hours per document, per lawyer
- Legal research means sifting millions of case-law records
- Result:** slow turnaround, high client cost, human oversight errors
- Need:** AI that speeds review & research without sacrificing accuracy

INDUSTRY APPLICATIONS

- Contract lifecycle management — clause extraction, redlining, risk flagging
- Legal research copilots for case-law search & summarisation
- M&A due-diligence acceleration and compliance document review
- E-discovery document classification at scale

Where AI Adds the Most Value

Document Review	40%
Legal Research	25%
Due Diligence	20%
E-Discovery	15%

REAL-WORLD USE CASE

- Harvey AI**
Deployed at firms incl. A&O Shearman & PwC for research & drafting
- Thomson Reuters CoCounsel**
Contract review & legal Q&A copilot
- Case Studies**
Report contract review sped up by ~70% with tools like Luminance

ADVANTAGES

- ✓ Dramatically faster document review and legal research
- ✓ Lower cost for routine, high-volume legal work
- ✓ More consistent clause identification and risk-flagging
- ✓ Frees lawyers for higher-value judgment & strategy work

CHALLENGES / LIMITATIONS

- ✗ **Hallucination:** LLMs can fabricate citations — courts have sanctioned lawyers (1,598+ tracked cases by 2026)
- ✗ Confidentiality & privilege risk with cloud-based models
- ✗ Still requires human verification — not yet fully autonomous
- ✗ Bias from training data; jurisdiction-specific nuance can be missed

HOW RAG REDUCES HALLUCINATION

FUTURE SCOPE

- ☆ Tighter RAG + verified citation databases to curb hallucination
- ☆ Multimodal LLMs reading scanned / handwritten filings
- ☆ Agentic AI managing multi-step workflows: draft → review → file
- ☆ Private, on-premise LLMs for confidentiality-sensitive firms

CONCLUSION

- ☆ LLMs are reshaping legal tech — faster contract analysis & legal research
- ☆ Real speed & cost gains, but hallucination and confidentiality remain risks
- ☆ Best used as a grounded, retrieval-backed assistant — not a lawyer replacement
